

30 Day Noise Study

Commissioned by

City of Redondo Beach

Prepared by

Sean Macke

STS Audio Consulting LLC

This study is to determine Community Noise Levels in the immediate vicinity of 100 W Torrence Blvd. The measurement system was placed 10 feet in the air on a city light pole. This was done to avoid tampering by people. Due to the contour of the landscape this also put the microphone at a more even height with the first floor of nearby housing. The system was calibrated at 94dB which provided a dynamic range of 117.51dB. The measurement period was a 15 minute Leq(equivalent sound level) which meets Community Noise criteria. The measurement is A weighted which is a filter that focuses the measurement in the frequency range that the human ear is most sensitive.

Measurements

During normal daytime period, the hours from 7am to 10pm, noise levels ranged from 55dB A to 75dB A. Noise level did not surpass 75dB A in a single 15 minute period. Nighttime period of the same day, 10pm to 7am, sound levels were below 65dB A from 9pm until 10:30pm. For the hours of 10:30pm to 12:45am the levels fell below 58dB A and from 12:45am to 6:15am the level did not exceed 50dB A. These sound levels are consistent with 55dB community noise standards for the R3 and high density zoning areas for the city of Redondo Beach.

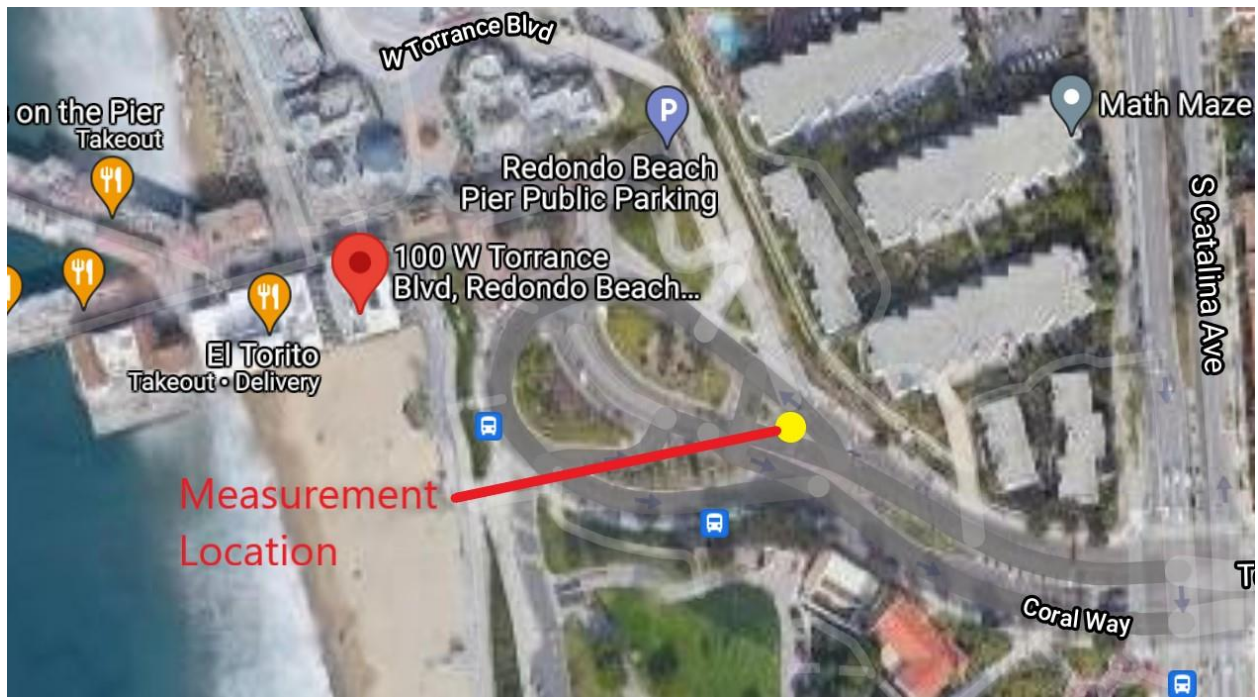

Community Noise Isolation

Homes in the area are constructed using stucco exterior walls. A stucco wall with single studs, batte insulation and 1/2" gypsum board(sheetrock) will provide an isolation rating of STC 46. This means that if an outside noise occurs at 75dB the wall will attenuate(lessen) the noise by 46db, thus if the noise is measured inside at the same time its measurement will be 34dB. Double pane glass windows and doors can provide an STC from 25 to 40 depending on construction, glass pane thickness and airspace between the panes. If the doors and windows are left open then there will obviously be no attenuation of the noise. This is a situation that cannot be mandated.

During this study there was an incident that created an unusually high amount of noise in the area, this is not normally occurring. A large number emergency response vehicles and first responders were required during the situation. This raised the normal ambient level starting at 8:30pm and continued for the next few hours. This is not a normal situation and cannot be considered as an impedance on the community noise level.

In summation the study has shown that Community Noise Levels in the measurement area fall within normal standards and any noises monitored were in short occurrence, less than 3 minutes.

Measurement location

#Calibration factor dBFS -> dBphysical : 117.51

#Country: USA

#Norm: 15 minute Leq

#Information: 30 Day Community noise levels

#LEQ average time: 15 minutes

#LEQ limit: 70dB(A)
